(1) Range and energy consumption values are calculated based on the WLTP combined cycle test procedure. Real world values will vary depending on many factors related to, for example driving style, route, weather and road conditions, vehicle condition, use and equipment. Values for purpose of comparison amongst vehicles only. (2) Range and energy consumption values are calculated based on the NEDC test procedure and according to ADR 81/02. Real world values will vary depending on many factors related to, for example, driving style, route, weather and road conditions, vehicle condition, use and equipment. Values for purpose of comparison amongst vehicles only. (3) 6 years from the date of vehicle registration or 150,000km (whichever comes first). See your service and warranty manual for full details. (4) 8 years from the date of vehicle registration or 160,000km (whichever comes first). See your service and warranty manual for full details. (5) This system is a driver's convenience system, not a substitute for active driver involvement. The driver must remain aware of traffic conditions and be prepared to use the brakes to avoid collisions. (6) Fuel consumption figures are according to ADR 81/02. Driving style, road and traffic conditions, fitment of accessories, environmental influences and vehicle condition can lead to consumption figures which may differ from those calculated with these standards.
