

RAM

RAM 1500

AN UNRIVALLED CLASS OF PICKUP TRUCK

A wide-angle, high-quality photograph of the interior of a Ram 1500 pickup truck. The view is from the passenger side looking towards the driver's seat. The interior is finished with black leather seats featuring white stitching and a quilted pattern on the backrests. The dashboard and center console are also visible, with a large infotainment screen mounted vertically. The truck has a sunroof, and the windows show a bright, hazy outdoor scene. The overall impression is one of luxury and modern design.

THE NEW RAM 1500. Built to deliver upon the legacy of the Ram Trucks that came before it, the Ram 1500 is roaring in with a redesigned exterior, an even more sophisticated and luxurious interior, a bold new powertrain under the hood, and technology at nearly every turn. The Ram 1500 features a modern exterior design that conveys a strong and heroic presence. Packed with a host of leading-edge features incorporated into what is undoubtedly the most luxurious pickup interior, even hard work will feel like play. But the real fun begins under the hood. It's there you'll find an unexpected level of power and performance thanks to the all-new 3.0L Hurricane Straight-Six Twin Turbo engine.

Available in a High Output or Standard Output, the new 3.0L Hurricane straight-six twin turbo engine helps make this Ram 1500 not only the strongest, but more importantly, the most refined yet. The top of the range new Ram

1500 Limited continues to raise the bar in the full-size pickup segment with the introduction of the High Output Hurricane engine producing 403kW of power and 707 Nm of torque. The new 1500 Express, Laramie®, and Rebel® models powered by the Standard Output Hurricane engine, outmuscle the 5.7L HEMI® engine with an impressive 313kW of power and 635Nm of torque. Even the most discerning V8 lovers sit up and take notice.

From jobsites to highways to boat ramps, the new Ram 1500 is built to serve those behind the wheel, more than ever. One test drive and not only will you experience serious power, you will experience both an evolution and a revolution of the truck that fans have depended on for years. When it comes to power, performance, and luxury, the new Ram 1500 is an unrivalled class of pickup truck.

HURRICANE

RAM EXCLUSIVE 3.0L HURRICANE STRAIGHT-SIX TWIN TURBO ENGINE

Without a doubt, the Hurricane powertrain is the next evolution in the proud RAM tradition of power and performance.

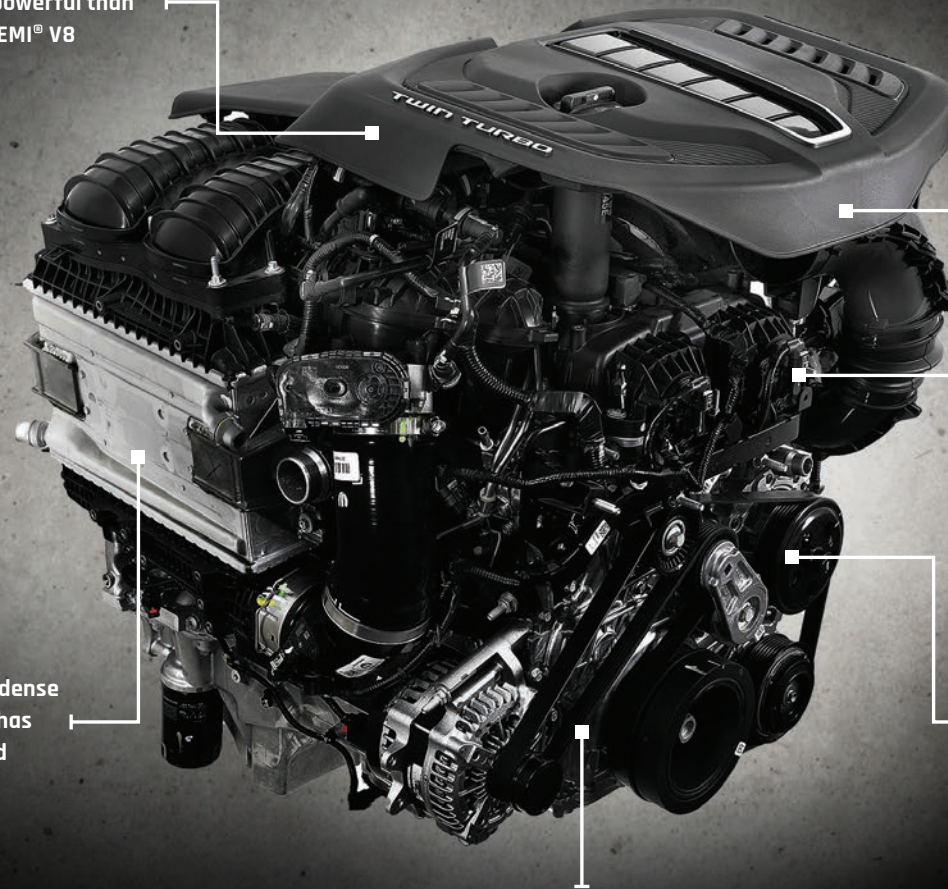

The 3.0L Hurricane straight-six twin turbo engine is the next evolution of Internal Combustion Engine (ICE) technology. The firing order, number of main bearings, and the crank design, all work together to deliver a smoother, more efficient, and more powerful powertrain. It's the most power-dense package RAM has ever offered. There's more power per litre than the supercharged alcohol-injected HEMI®-powered Dodge Demon 170 — along with the incredible torque on demand that inline designs are known for, as well as superior fuel economy.

The foundation of the Hurricane engine is a deep-skirt cast-aluminium block with a structural aluminium alloy oil pan. The strongest RAM engine ever uses cross-bolted steel main bearing caps to contain the robust rotating assembly of a forged-steel crankshaft and forged-steel connecting rods. During manufacturing, the block is deck-plate honed to optimise the cylinder bore shape, which helps improve fuel efficiency.

Each turbocharger in the Hurricane straight-six twin-turbo feeds three cylinders. From a performance standpoint, two smaller turbochargers with less inertia spin up faster and deliver boost to the engine at lower rpm than a single, large turbo. The result? The Hurricane twin-turbo flexes its muscle with a broad, flat torque band that sees the engine maintain at least 90% of peak torque from 2,350 rpm all the way to its red line. Without a doubt, the Hurricane powertrain is the next evolution in the proud RAM tradition of power and performance.

Power output of 313kW / 420HP & 403kW / 540HP makes it more powerful than the 5.7L HEMI® V8

Each turbocharger in the Hurricane straight-six twin-turbo feeds three cylinders.

Two smaller turbochargers with less inertia spin up faster and deliver boost to the engine at lower rpm than a single, large turbo, resulting in superior performance.

The most power-dense package RAM has ever offered

Incredible torque on demand that inline designs are known for, as well as superior fuel economy

More power per litre than the supercharged alcohol-injected HEMI®-powered Dodge Demon 170

YOUR GUIDE TO PAYLOAD AND TOWING REQUIREMENTS

When it comes to heavy loads and towing, understanding your RAM's capabilities is crucial. At Ram Trucks Australia, we prioritise safety and compliance, ensuring that you are fully informed about the engineering limits of your vehicle and your responsibilities as a road user. Each RAM variant is designed with specific maximum allowable payloads, towing capacities, and combined weight limits, all of which interact with each other and observing these maximums is essential for maintaining the vehicle's integrity and ensuring legal compliance.

Operating your RAM within these Towing Limits is not just a recommendation; it's vital for your safety and the safety of others on the road. Exceeding these capacities (whether individually or in combination) can lead to serious risks, including personal injury, vehicle damage, and financial loss. Our comprehensive guidelines will help you be aware of the complexities of payload management, towing capacities, and weight distribution, and give recommendations on how you can carry and tow securely and responsibly. Scan the QR code to access, read, and observe our Payload and Towing Requirements Guide and be sure to utilise our Towing Calculator tool to estimate the capacity and safety of your tow.

¹19 Speakers including subwoofer and six coaxial two-way speakers strategically mounted in 12 locations throughout the vehicle

²Maximum braked towing capacity is subject to regulatory requirements and vehicle weight restrictions (which may require occupants and/or luggage to be restricted)

³Payload and kerb weight figures are based on vehicle certification. It is the driver's responsibility to ensure: weight of fully loaded vehicles do not exceed GVM; front and rear axle load limits are not individually exceeded; the combined weight of the fully loaded vehicle (including tow ball download when towing) and trailer does not exceed the GCM; compliance to State and Territory towing regulations. Payload is the combined value of occupants, luggage, cargo, added options, accessories and tow ball download (when towing). Kerb weight includes the vehicle with a full tank of fuel and all standard equipment, excluding occupants. Additional weights of optional features, occupants, luggage, cargo, accessories and tow ball download (when towing) must be taken into account when calculating payload.

⁴Based on kerb weight as per vehicle certification. Do not exceed rear axle load limits, which are a maximum based on sealed road use only. Avoid operating the vehicle at max tub load and rear axle load limits on unsealed roads. Distribution of payload in the tub may affect and impact both tub and rear axle load limits, requiring them to be reduced. Never operate vehicle at vehicle maximum capacities for extended periods of time, regardless of road condition or terrain.

⁵Figure according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real-world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.
