132TSI Premium with optional Sports Luxury Package shown

Golf Alltrack.

The anywhere Golf.

The new Golf Alltrack has been designed and built with the needs of the modern Australian driver firmly in mind. Versatile, comfortable and stylish, the Golf Alltrack is the perfect all-rounder, a vehicle engineered to take on challenging long-distance drives, but just at home on short drives around the city.

With three variants available to choose from, the Golf Alltrack can be attuned to fit perfectly with the demands of your lifestyle. Volkswagen's tried and tested 132kW TSI petrol engine offering comes in Standard and Premium trim, while the 135kW TDI diesel variant combines all the benefits of Premium trim with a high-torque and reliable diesel powertrain.

The latest range presents a fresh and confident face to the world courtesy of a number of design updates. Revisions to the Golf Alltrack's rugged and eye-catching body shape, plus the addition of LED technology to front and rear lights, and new interior trim and decorative inlays, combine to make a bold statement. Other appealing features stay exactly the same, such as confidence-inspiring 4MOTION technology, which is a standard inclusion across the range.

All Volkswagens are equipped with the very latest technology and the Golf Alltrack is no exception. The vehicle brims with the latest advancements in driver assistance technology, while there's no denying the appeal of the Golf Alltrack's optional Infotainment Package with the Discover Pro 9.2" infotainment system and Active Info Display. Offering the ultimate in all-terrain, all-purpose driving, the Golf Alltrack is truly a vehicle for the adventurous and the adventurous at heart.

Exterior

Sporty, stylish and sturdy, the latest Golf Alltrack combines the space and practicality of a family-sized wagon with the go-anywhere resilience of a robust off-roader. Styling enhancements reveal an evolution of the Golf Alltrack shape, meaning it is better equipped than ever before to withstand the challenges presented by the great Australian outdoors.

With its raised ground clearance the Golf Alltrack can take on uneven surfaces with confidence, while durable 17" Valley alloy wheels (and optional new 18" Kalamata alloy wheels) keep the Golf Alltrack firmly planted, whether on bitumen or loose gravel.

Rugged it may be, but the Golf Alltrack sacrifices nothing in terms of style and poise. Chrome and silver highlights all around the vehicle lend an attractive touch. These highlights include Silver door mirrors and side sill extensions, as well as Silver underbody trim and chrome trim strips on the side windows. Chrome roof rails provide the perfect excuse to stow additional gear next time you embark on a long-haul trip.

Country driving requires clear nighttime vision and the ability to be seen from afar. With LED daytime lights and LED tail lights as standard, the Golf Alltrack is an assertive and distinctive presence on the road. LED headlights with dynamic cornering lights in Premium variants cast an exceptionally strong beam over the oncoming road. Front fog lights with static cornering lights illuminate the way when visibility is compromised. A bold rear diffuser distinguishes the Golf Alltrack from the rear, while exposed dual chrome exhaust tailpipes, complement the chrome highlights found elsewhere on the bodywork.

- 01 17-inch Valley alloy wheels
- 02 18-inch Kalamata alloy wheels
(available on optional Sport Luxury Package)
- 03 Chrome exhaust tailpipes

Interior

The Golf Alltrack is as luxurious and comfortable inside as it is stylish and durable outside. Quality materials have been used throughout the cabin, including new interior trims and decorative inlays, raising refinement to levels unsurpassed in the Golf Alltrack's class. The leather multi-function steering wheel and gearshift knob are a delight to touch, as are the comfortable and supportive seats complete with Black 'Summits' cloth (132TSI) or perforated leather appointed (Premium variants) seat upholstery*.

And this wouldn't be a Volkswagen if it wasn't equipped with the very latest technology to make every drive an enjoyable one. Volkswagen's attractive and intuitive 8" infotainment system with App-Connect™ puts the world of information and entertainment at the driver's fingertips, while selecting the Infotainment Package in Premium variants equips the vehicle with the next-generation Discover Pro 9.2" satellite navigation system with Gesture Control‡ and impressive Active Info Display‡ instrument cluster.

Unlocking and starting the Golf Alltrack is a cinch with clever Keyless Access. As long as you have your key on you, the doors will unlock just by operating a front door handle. The system releases the steering lock and turns on the ignition electronically without you having to insert the key. The engine can then be started simply by pressing the start button.

Of course, any wagon worth its salt needs a large luggage compartment. The Golf Alltrack has an impressive 605 litres of boot space available, making it enormously useful whether on a camping holiday or a trip to the local supermarket. With the rear seats folded down, the capacity becomes an outstanding 1620 litres. The 40/60 split folding rear seats even offer remote unlocking for ease of use. A luggage partition net keeps belongings separate from the cabin of the car for added convenience.

02 Spacious luggage compartment

03 Front door stainless steel sill scuff plates

*Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

~App-Connect is compatible for selected apps with the latest smartphone versions of iOS and Android. ‡Available as part of the optional Infotainment Package.

Highlights

The Golf Alltrack promises a serene and confidence-inspiring driving experience courtesy of its refined transmission and a choice of two engines.

Owners can now select either the powerful 1.8-litre turbocharged 132kW TSI petrol engine or the new high-torque 135kW TDI diesel engine, both of which are perfectly matched with Volkswagen's sophisticated and sweet-shifting Direct Shift Gearbox (DSG). Both engines are equipped with BlueMotion technologies to help promote economical driving.

With 4MOTION all-wheel drive standard across the entire range, the Golf Alltrack has been optimised to tackle even the most challenging terrain. It works in partnership with other clever technology such as Extended Electronic Differential Lock (XDL) and Electronic Stabilisation Program (ESP) to maximise traction even on challenging surfaces.

Further assisting drivers is Driving Profile Selection, which allows for customisation of the Golf Alltrack's settings to suit prevailing conditions. As well as the pre-set driving modes of Normal, Sport and Eco, the Golf Alltrack features an Off-road mode that activates Hill Descent Control and adapts the Anti-Lock Braking System (ABS) and accelerator pedal response for off-road driving.

The result is an exceedingly safe and reassuring drive that is helped further by a wide range of safety and assistance systems as standard, such as Manoeuvre braking, front and rear*; assisting the driver to avoid or reduce damage in a potential low speed impact by initiating emergency braking, Front Assist with City Emergency Brake (City EB)*, Multi-Collision Brake and Driver Fatigue Detection* system. Select the optional Driver Assistance Package and the vehicle receives Volkswagen's class-leading Park Assist* technology for stress-free parking, as well as Lane Assist* and Adaptive Cruise Control (ACC)*.

Inside, the Golf Alltrack impresses with its new-generation 8" and 9.2" Discover infotainment systems. The latter is available as part of the optional Infotainment Package and incorporates sophisticated Gesture Control, which allows the driver to navigate through various menus with a simple mid-air swipe of the hand, and new Media Control, which puts passengers in control of music and more via their smartphone or tablet.

For the ultimate in driving enjoyment, the Sport Luxury Package (available for Premium variants) includes steering wheel mounted gearshift paddles, a panoramic electric glass sunroof and eye-catching new 18" Kalamata alloy wheels.

*Safety technologies are not a substitute for the driver's responsibility of the vehicle. ^Available as part of the optional Sports Luxury Package

Colours & Upholstery

The Golf Alltrack's broad colour palette complements the stylish interior trim, making configuration a simple pleasure. Customise the bodywork of your Golf Alltrack by choosing from a range of paint finishes that includes Pure White, Tornado Red, striking metallic options and Deep Black Pearl Effect. Luxurious black Vienna leather appointed seat upholstery* comes as standard.

01 Black "Summits" Cloth

Volkswagen Choice - Guaranteed Future Value

We are out to prove there are still some guarantees in life. We have developed Volkswagen Choice[^] - a flexible finance solution that provides you with the assurance of knowing exactly what the minimum value of your vehicle will be down the track. With Volkswagen Choice[^], you can enjoy your car without worrying about what the future will bring, providing peace of mind.

At the end of your term,
you can simply choose to:

Trade-in

Your vehicle and re-purchase a new Volkswagen under Volkswagen Choice.

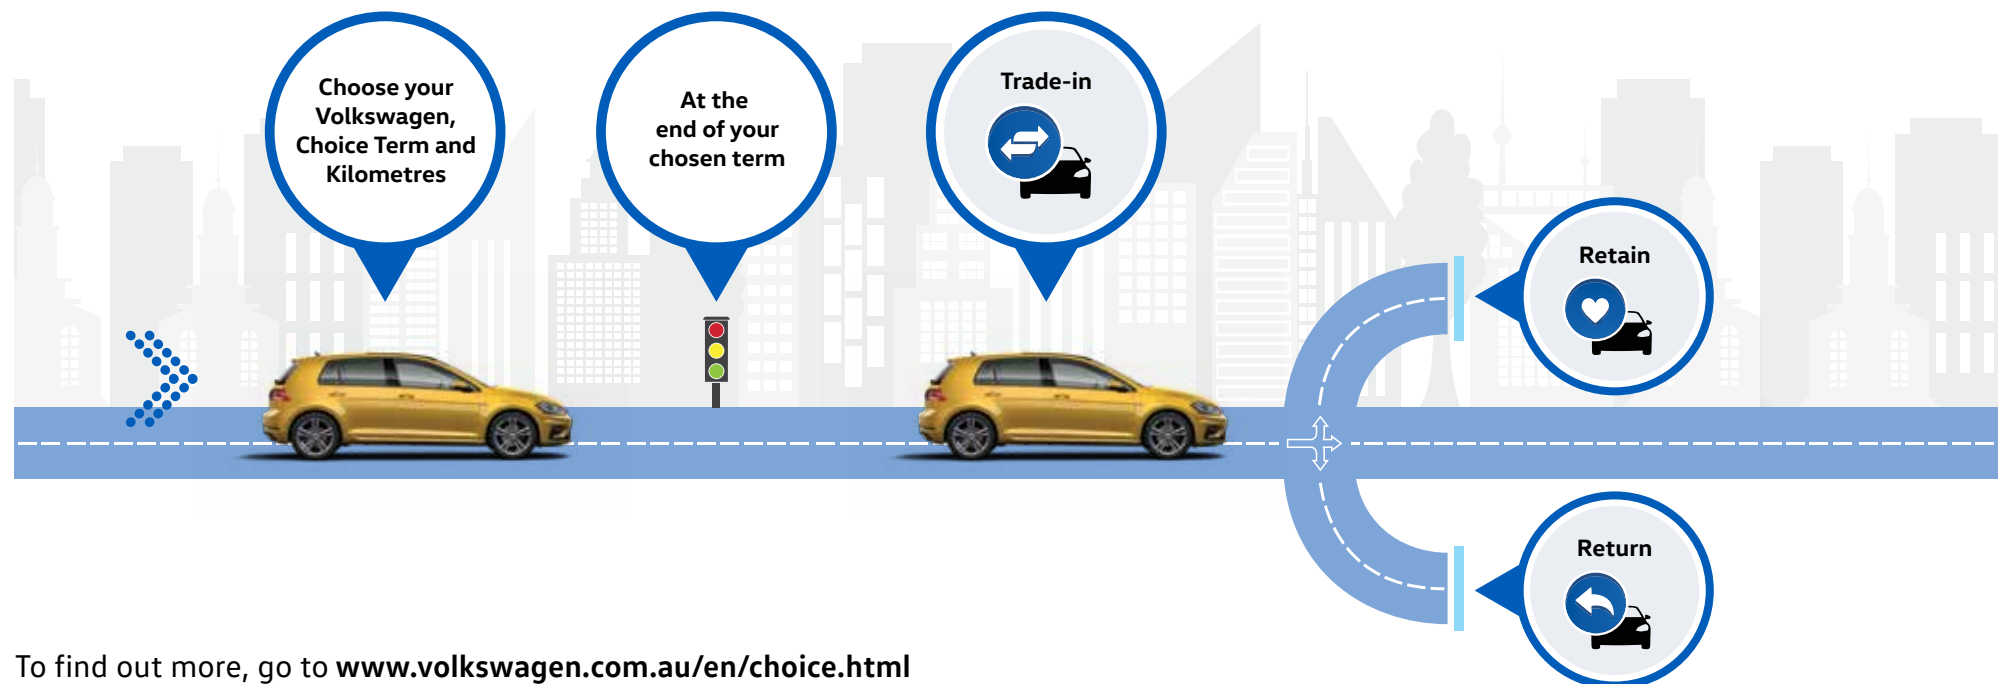

Retain

Your vehicle by paying or refinancing the Guaranteed Future Value amount.

Return

Your vehicle and receive the Guaranteed Future Value[#]

To find out more, go to www.volkswagen.com.au/en/choice.html

[^]The Volkswagen Choice Program consists of an option to require Volkswagen Financial Services to purchase your vehicle at the end of your Volkswagen Financial Services Chattel Mortgage or Consumer Loan for a value (known as the Guaranteed Future Value) determined by Volkswagen Financial Services and set out in your contract. [#]The Guaranteed Future Value is not a representation by Volkswagen Financial Services as to the likely market value of your vehicle as at the end of your contract. The option is available on new and demonstrator Volkswagen vehicles for selected models only. Please verify with your dealership vehicles that are eligible for the program. If vehicles are not returned in an acceptable condition, as defined in the terms and conditions or exceed kilometre restrictions the Guaranteed Future Value will be reduced. See the Volkswagen Choice Fair Wear and Tear Guide for more information on the required conditions and circumstances. The cost of the Volkswagen Choice Program is incorporated into the applicable interest rate. Please read the full terms and conditions. Please consider whether these products and services are appropriate for your circumstances. Before acting on any of the information on this page, please seek independent financial and tax advice. Full terms and conditions are available upon application. Available only to approved applicants of Volkswagen Financial Services. Subject to credit assessment. Fees and charges apply. Fleet, government, rental buyers, hire car and chauffeur companies are excluded. Available at participating Volkswagen dealers. Volkswagen Financial Services is a trading name of Volkswagen Financial Services Australia Pty Limited ABN 20 097 071 460. Australian Credit Licence 389344

#Please note figures are sourced from overseas data where equipment levels by model variant may vary.

*The Start/Stop system is designed to reduce fuel consumption. It achieves this by conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

**Fuel consumption figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

Technical Specifications

	132TSI 132TSI Premium	135TDI Premium
Running Gear	1.8 litre TSI BlueMotion Technology	2.0 litre TDI BlueMotion Technology
Suspension		
Front Axle		Independent, MacPherson struts with lower A-arms. Anti-roll bar

*Leather appointed seats has a combination of genuine and artificial leather, but are not wholly leather.

Please note Metallic (M) and Pearl Effect (PE) paint are optional at extra cost.

Glossary

4MOTION

An all-wheel drive system that provides the best possible traction at all road speeds, in all weather and road conditions. An electronically controlled multi-plate clutch directs torque to the axle with the best traction.

When operating under a relatively low load or when coasting, power is primarily distributed to the front axle, thus saving fuel. However, the rear axle can be variably engaged in fractions of a second whenever necessary, even before any wheel starts to slip and therefore reducing the potential for a loss of traction. The wheels of the vehicle are prevented from spinning even when driving off and accelerating.

Activation of the multi-plate clutch is based primarily on the engine torque demanded by the driver. In parallel, a system within the all-wheel drive control unit evaluates such parameters as wheel speeds and steering angle.

Adaptive Cruise Control (ACC)*

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Golf Alltrack approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Golf Alltrack then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driver profile selector.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

*optional equipment

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicles final braking pressure. So even when you take your foot off the brake pedal, all four wheels brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Direct Shift Gearbox (DSG)

DSG is a manual gearbox in which the gearshifts are controlled electronically. What makes the DSG unique is that it has 2 separate gear sets operated by 2 clutches. The benefit of 2 gear sets and 2 clutches is that one gear set and clutch is engaged driving the vehicle with the second disengaged clutch having already pre-selected the next gear awaiting for power to be transferred. As the next gear has already been pre-selected prior to power being applied, the gear change only takes 3-4 100ths of a second. There is virtually no interruption to power, traction or acceleration. The DSG also offers Tiptronic gear selection and sports mode.

Driving Profile Selection

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco, Off-road and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal and steering while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by including coasting function and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Exclusive to Alltrack, Off-road mode

Glossary

activates a hill descent function (maintains a constant speed on the descent), a modified accelerator pedal response and an off-road configuration of the ABS (modified control thresholds form a desirable wedge of gravel in front of the wheels). The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 65 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Front Assist with City Emergency Brake (City EB) function

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision. The traffic ahead is monitored constantly by the radar at the front.

If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Front Assist with City Emergency Brake (City EB) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Glossary

Lane Assist*

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage. Manoeuvre braking is activated in the front when the switch is pressed for the parking distance sensors and in the rear when reverse gear is selected or if the vehicle is rolling backwards.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-Collision Brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Park Assist*

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Proactive occupant protection system*

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation, the occupants and the vehicle are prepared for a possible accident. Automatic tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.
