Golf

Fun for everyone

The Volkswagen Golf is that rare breed – an iconic vehicle with a heritage spanning almost 50 years, but one that moves resolutely with the times.

The latest Golf, the 8th generation to wear the venerated Golf badge, marks the next stage in the evolution of an automotive classic. All of the familiar Golf attributes are still present – from the entry to the range through to the potent Golf GTI – but this generation of Golf has taken bold strides towards an era of digitalisation and autonomous driving.

Intelligent IQ.DRIVE* safety systems in the Golf, harness innovative technologies such as Travel Assist to make every drive safe and comfortable. And there's no end to the infotainment possibilities presented by the Golf's impressive digital instrumentation with high-resolution display screens and intuitively useable functions.

Timeless Golf styling combines with dynamic design elements to form a vehicle that is both reassuringly familiar and strikingly contemporary. Nowhere is this more evident than in the latest generation of Golf GTI, which takes all of the GTI's archetypal styling cues, such as red stripe across the radiator grille and honeycomb air intake, and gives them a thoroughly modern flourish. Features such as dynamic front styling and redesigned LED headlights and taillights in the Golf GTI and across the entire range reveal a vehicle whose every element has been carefully considered.

Complementing the Golf's sleek styling is a 1.4-litre turbocharged TSI petrol engine (2.0-litre TSI engine in the Golf GTI) offering effortless performance and superior efficiency. Combine satisfying engine performance with the Golf's assured roadholding abilities, its suite of driver assistance aids and optimum levels of comfort and you have a vehicle that offers unalloyed driving pleasure.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

Exterior

The Volkswagen Golf long ago established itself as belonging to the pantheon of automotive design classics. That’s why this 8th generation of the Golf marks an evolution, rather than a revolution, of the shape that is known and loved by so many.

An updated body structure means the Golf is safer than it has ever been, while dynamic front bumper styling, eye-catching lower air intake grille, narrow LED headlights and slim radiator grille incorporating the redesigned Volkswagen roundel all represent the next stage in the design evolution of the Golf.

Viewed in profile, a prominent character line draws the eye from the front headlights to powerful rear haunches. The rear design of the Golf contributes to the cohesive whole. Horizontal lines and narrow LED headlights either side of the Golf nameplate convey an impression of width, while the smooth lines of the tailgate act in harmony with the Golf’s elegant rear diffuser.

Special mention must always be made of the Golf R-Line and Golf GTI whenever discussing vehicle aesthetics. Sporty exterior and interior styling in the Golf R-Line convey a sense of speed and athleticism. As for the iconic Golf GTI, all of the model’s traditional design hallmarks have been retained, but improved upon. The famous red radiator grille stripe is now illuminated (it forms part of the LED daytime running lights). And the characteristic black honeycomb air intake now features a striking arrangement of LEDs on either side to create the vehicle’s fog lights. Of course, the Golf GTI wouldn’t be the same if it wasn’t for the vehicle’s distinctive dual chrome exhaust tailpipes and potent-looking red brake callipers. No matter which Golf you drive, you can’t help but make a bold design statement.

Golf R-Line model shown

Golf R-Line model shown

Interior

Driver and passengers alike are immediately struck by how comfortable and solid the Volkswagen Golf feels, plus how easily it mixes quality design and functionality. The Golf’s solidity comes through in the reassuring ‘thunk’ you hear when closing any of its doors, but it’s also apparent in the reassuring fixtures and finishes used right throughout the cabin. Advanced German engineering ensures that every facet of the interior has a role to play, that the cabin layout is logical and ordered by definition, and that comfort and practicality are second to none. The ergonomic appeal of any cabin can be measured by how refreshed vehicle occupants feel once they have finished a long drive. In this regard the Golf excels. Adjustable seating and steering mean drivers can find an ideal driving position to sustain them on long road trips. Low levels of noise/vibration/harshness (NVH) make every journey a relaxing one, as do controls that fall easily to hand and small touches like rear air-conditioning vents for rear passenger comfort.

Other updates to the latest-generation Golf are subtle, but prove that the Golf always moves with the times. Take, for example, the headlight switchgear which, together with the windscreen and rear window controls, are now operated using a digital touch panel. This modern convenience is a standard addition to the Golf range, whereas the Golf R-Line model grade receives additional intuitive features such as capacitive touch controls on the steering wheel in place of conventional buttons.

Nowhere does form and function intersect more completely than in the range-topping Golf GTI. With its honeycomb-patterned dash panel and door trims, sports seats with integrated head restraints, GTI-style tartan fabric, stainless steel pedals, the Golf GTI’s interior is as distinctive – and impressive – as they come.

Golf GTI model shown

Golf R-Line model shown
App-Connect featuring Apple CarPlay®

Technology

In keeping with Volkswagen’s commitment to technology that excites and inspires, the cabin of the Golf receives the very latest in digital innovation.

Foremost among the inclusions in the Golf is the Innovision Cockpit, an immersive, fully digital driver display landscape consisting of Digital Cockpit Pro and 10-inch Discover Pro navigation system. The intuitive touchscreens mean that many of the buttons and controls traditionally found on a dashboard have been made a thing of the past.

Other features of the Golf’s cabin are just as impressive. Standard across the Golf range is the Air Care 3-zone climate control air-conditioning system with air cleaning function and allergen filter. LED technology is used as effectively inside the cabin as it is out, with the Golf Life able to illuminate the interior with your favourite colour courtesy of 10-colour ambient lighting (30 colours as standard in the Golf R-Line and Golf GTI).

In the Golf, Wireless App-Connect~ for Apple CarPlay® and Android Auto™ and four USB-C ports mean you're only a touch away from all your favourite apps and media files. DAB+ digital radio ensures you're receiving superior audio quality and have more station to choose from. And Keyless access and start makes it a cinch to jump in your Golf and just drive away. As is befitting its sporty styling, the Golf R-Line incorporates a multi-function sports steering wheel and stainless steel pedals, dark tinted rear and side windows and progressive steering (features also found in the Golf GTI).

~App-Connect featuring wireless Apple CarPlay® and wireless Android Auto™ is compatible with the latest versions of iOS and Android, active data service required, optional connection cable (sold separately). (not available on Golf variant, standard on Golf Life, Golf R-Line and Golf GTI)

Golf R-Line with Optional Sound & Vision Package shown

IQ.DRIVE*

The latest generation of Golf heralds an exciting era of digitalisation and a further step towards fully autonomous driving.

There's no denying the importance of Volkswagen's IQ.DRIVE when it comes to intelligent safety and assured driving enjoyment. The term is used to describe all of Volkswagen's driver assistance systems, encompassing innovations that Volkswagen is developing to aid automated driving, plus all the technology Volkswagen offers in its vehicles to ensure a safe and satisfying driving experience.

Central to the IQ.DRIVE package is Travel Assist*, a sophisticated driver aid that is especially suited to long journeys on the motorway. It uses the combined functions of Adaptive Cruise Control (ACC) and Lane Assist to accelerate, brake and maintain the vehicle's position within its lane.

The capacitive steering wheel can detect whether the driver is fully in control of the steering wheel and will issue a visual and audible warning if control is not detected.

The system works in conjunction with the Golf's comprehensive Occupant Protection system, which incorporates nine airbags (front, front centre, front and rear side and curtain airbags) to shield the driver and passengers from the worst effects of a collision.

The Golf takes driver assistance to the next level with inclusions such as Exit Warning System*, which warns vehicle occupants of a potential collision when about to open a door, and Emergency Assist* technology. The latter provides a visual and audible warning to the driver if no steering activity is detected, such as when the driver is incapacitated, and takes measures such as slowing the vehicle and tightening the seatbelt to help reduce harm.

Safety is always paramount, but the Golf has given just as much heed to technology designed to assist in getting around town. Park Assist*, Rear View Camera (RVC)* and Keyless Access are all there to promote everyday driver convenience.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

Golf GTI model shown

The Golf GTI

With its impressive pedigree, outstanding performance characteristics and potent styling, the Golf GTI is the small sports car that other vehicles can only aspire to be.

The 8th evolution of Volkswagen’s original hot hatch incorporates all of the technical upgrades added to the recent model update, plus with suspension materials and configurability options. Styling updates, such as striking LED front fog lights, sculpted front seats and Innovision Cockpit improve on what is already a design classic.

Every drive in the Golf GTI is informed by a performance philosophy that prioritises exhilaration and downright driving fun. The GTI’s punchy TSI turbocharged petrol engine generates 180kW of power and 370Nm of torque. It pairs perfectly with Volkswagen’s 7-speed wet clutch DSG (Direct Shift Gearbox) transmission, now equipped with ‘shift by wire’ technology in place of a selector lever.

Drivers feel at one with the road courtesy of the Golf GTI’s Vehicle Dynamics Manager, a control system that coordinates and activates the functions of the electronically controlled front-axle differential lock, the Extended Electronic Differential Lock (XDL) as well as the lateral dynamic components of the Adaptive Chassis Control during every driving manoeuvre. Central to the system is electro-mechanical front differential lock, which significantly improves handling performance by counteracting understeer and minimising traction control interventions. The result is more agile steering, greater stability in vehicle response and an ability to take faster speeds through corners.

As always, the driver is placed central to the action. The Golf GTI’s multi-function sports steering wheel with perforated leather and silver spokes offers progressive steering for added dynamic feel. Steering-wheel-mounted Tiptronic gearshift paddles allow for rapid up and downshifts and make all the difference when driving with purpose.

Also at the fingertips is Driver Profile Selection, which allows for easy selection of Comfort, Normal, Sport or Individual modes. Each profile setting adjusts the Golf GTI’s Adaptive Chassis Control to fine-tune the vehicle’s driving characteristics and emphasise the unbridled experience of driving a GTI.

Overseas model shown, local specifications may vary

Optional Packages

You’re never stuck for driver comforts when you drive a Golf. But you can tailor your vehicle to suit your lifestyle by choosing from among a range of comprehensive optional packages.

Every trip in the Golf is an adventure with the Sound & Vision package, available in the Golf Life and R-Line. Music has never sounded as good as it has through the premium Harman Kardon audio system, with its eight speakers + centre speaker, subwoofer and powerful 12-channel amplifier. Also included in the package is a futuristic Head Up Display that projects useful vehicle information such as speed and navigation advice onto the windscreen, meaning drivers can keep their eyes firmly on the road.

The Sound and Style package is an optional extra for the Golf GTI. The Sound and Style package couples sophisticated technology inclusions such as the Harman Kardon Premium Audio System and Head up display with stunning 19" Adelaide alloy wheels.

The Comfort & Style Package is an optional inclusion for the Golf Life and offers an outstanding array of comfortable conveniences for driver and passenger alike. Supple Microfleece upholstery and Comfort sport seats provide firm support with lashings of style, while a panoramic sunroof allows natural light to stream into the cabin (it’s also a one-off option in the Golf R-Line). Golf Life drivers can also select a cabin colour to perfectly complement their mood by choosing from among 30 stunning ambient colour options. It’s a feature that really comes into its own when the sun goes down.

The Luxury package, available only in the Golf GTI, offers additions that are the pinnacle of sophistication. You’ll be sitting in the lap of luxury with the package’s Vienna leather appointed upholstery#, electrically operated driver seat with memory, heated and ventilated front seats, heated steering wheel and panoramic electric glass sunroof.

#Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

5 years
Unlimited Kilometre
Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles¹

1 year
Roadside Assist

Every new Volkswagen comes with a 1year Roadside Assist membership².

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen
Care Plans

Volkswagen Care Plans³ have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured
Service Pricing

Assured Service Pricing⁴ gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts[®] to ensure your Volkswagen stays a Volkswagen.

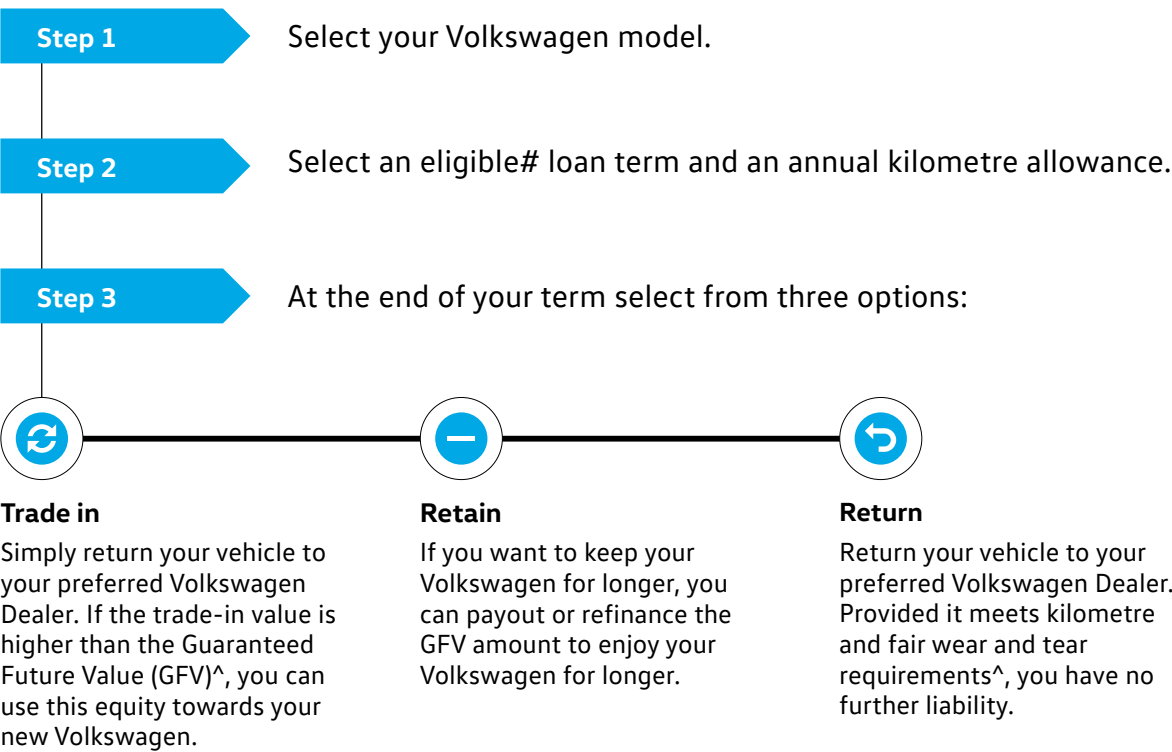

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

Volkswagen Choice[^]

Guarantee the minimum future value of your Volkswagen

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

1. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

2. Volkswagen Assist (Roadside Assistance) Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/service-repairs-parts/roadside-assist.html>

3. Volkswagen Care Plans are available for purchase at <https://www.volkswagen.com.au/en/owners-service/service-repairs-parts/care-plans.html> or from participating authorised Volkswagen Dealers for Eligible Vehicles and covers standard items as contained in each scheduled service interval only. The service intervals occur every 15,000 KM/12 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles, which are scheduled to occur every 20,000 km/12 months (whichever occurs first). These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions.

4. Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles only, 20,000kms/ 12 month interval (whichever occurs first). Volkswagen will publish the maximum price for a specified Scheduled Service on 1st February each year (or first business day after this date), and pricing will remain fixed for 12 months only. For more details on the Eligible Model's, pricing, items not included and for full terms and condition, please see <https://www.volkswagen.com.au/app/locals/service-pricing-guide>.

[^]Volkswagen Guaranteed Future Value consists of an option to return your vehicle to Volkswagen Financial Services (VFS) ABN 20 097 071 460, Australian Credit Licence 389344, at the end of the term and requires VFS to purchase the vehicle at an agreed price determined by VFS, known as the Guaranteed Future Value (GFV). #Eligible loan terms include 12-60 months, vary by model and are subject to change, ask dealer for more information. At the end of the term, you can elect to: (1) trade-in; (2) return; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your Official Volkswagen Dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

Glossary

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Golf approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Golf then accelerates up to the pre-set desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with an automatic transmission. ACC can be reactivated automatically by depressing the accelerator pedal.

In the R-Line and GTI model grades, the dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driving profile selection.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function[^]

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Driving Profile Selection[^]

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Eco, Comfort, Sport and Individual. Eco mode has been designed to enhance fuel efficiency by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. The Comfort profile offers a comfortable but dynamic driving style, with a softer suspension setting of the adaptive chassis control (GTI). Sport provides faster response of the accelerator pedal and steering while the DSG transmission switches to Sport mode. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes and tensioning of the driver's seatbelt to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically, parking position is engaged, the doors are unlocked and the interior lighting switched on.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle horn may sound to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Exit Warning System

While the Golf is stationary, the exit warning system warns the occupants about a potential collision when a door is opened. The system uses the rear radar sensors to monitor the area behind and to the side of the vehicle. Where possible, it detects objects, such as cars and cyclists, as they approach the vehicle from behind. When you open the door, the warning lamp on the exterior mirror flashes if another road user in a critical situation is detected. At the same time an acoustic warning signal is heard. The corresponding warning lamps also flash if another road user is detected in a critical situation while the door is already open.

Exit warning system cannot replace the driver's attentiveness. If the driver or passenger notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly.

[^]Only on selected models.

Glossary

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning may be repeated once if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. The driving behaviour can be evaluated only when the speed is above approximately 60km/h. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Front Assist with Pedestrian and Cyclist Monitoring functions

The Front Assist ambient traffic monitoring system uses a radar sensor and multi-function camera to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

At vehicle speeds below 30km/h, the system monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, the brakes are first pre-charged and makes the Brake Assist system is made more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, emergency braking is independently applied. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, the system will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian and Cyclist Monitoring is an extension of the Front Assist monitoring system. The system uses a radar sensor in the radiator grille and windscreen mounted multi-function camera to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with Pedestrian and Cyclist Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Front Differential Lock[^]

The front differential lock is an electronically controlled mechanical differential lock. The drive torque is distributed via an electronically operated clutch in accordance with the driving situation. The differential lock

actively counteracts understeer when cornering by increasing the drive force to the wheel on the outside of the bend. This provides more agility and precision on curves, and a more linear driving response. The front differential lock also provides maximum traction for front-wheel drive vehicles. Both the XDL and front differential lock increase agility, traction and cornering ability. XDL exerts its effect during medium lateral acceleration, whilst the front differential lock enhances this effect right up to the dynamic driving limit range.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle at speeds above 60km/h. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration. Additionally, if no active steering movements by the driver are recognised, a message will appear in the Digital Cockpit in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Light Assist[^]

Light Assist provides enhanced comfort and safety on the road by means of automatic high beam control. A camera on the interior mirror observes the traffic above 60 km/h and in complete darkness, Light Assist automatically switches on the high beam headlights. The system detects vehicles travelling ahead, as well as oncoming traffic and automatically dips the headlights before they are dazzled. Automatic alternation between high beam and low beam headlights ensures optimum illumination of the road ahead.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised by the parking distance sensors, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

[^]Only on selected models.

Glossary

Oncoming vehicle braking when turning

Oncoming vehicle braking when turning aims to prevent or reduce the impact of head-on collisions with vehicles when turning. The front radar sensor and windscreen camera are used to monitor the area in front of the driver's own vehicle. If a hazardous situation is detected – the driver turns into oncoming traffic, the vehicle is automatically braked and a warning issued to help prevent a collision. Key variables for detection of the turning manoeuvre are the steering angle and the steering-angle speed. A turning manoeuvre is detected even if the turn signal has not been activated. The function is active up to a speed of approximately 15 km/h.

Oncoming vehicle braking when turning cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Proactive occupant protection system

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation at speeds above approximately 30km/h, the occupants and the vehicle are prepared for a possible accident. Automatic reversible tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. The hazard warning lights are activated. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

The latest generation of the Proactive Occupant Protection System can detect risks at the rear utilising the signals from the rear radar sensors for the Side Assist system. If the system recognises an immediate risk, the vehicle and occupants are prepared for a possible rear end collision by warning an approaching vehicle with fast hazard warning light frequency, closing the side windows (and optional panoramic sunroof), as well as tighten the front seat belts.

Side Assist with Rear Traffic Alert

Side Assist with Rear Traffic Alert system supports the driver in assessing and avoiding dangerous situations, especially in critical situations, e.g. city and heavy traffic. Side Assist detects cars and motorcycles next to and up to 70m to the right and left behind your own vehicle and highlights these vehicles via a LED indicator in the door mirror at speeds above 15km/h. If you indicate to change lanes, the system calculates whether one of them could be dangerous due to position and speed and if deemed necessary will draw attention to

this by flashing noticeably. In this instance, Lane Assist can also apply corrective steering to help avoid a collision.

Rear Traffic Alert monitors the traffic crossing behind the vehicle when reversing out of a parking space or manoeuvring. Utilising the Side Assist radar sensors in the rear bumper the system warns the driver of approaching traffic via an audible warning followed by a visual message in the Optical Parking System (OPS) and can also provide braking intervention if necessary to help avoid a collision.

Side Assist with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Travel Assist

Travel Assist is an assistance system for partly automated driving. At the push of a button, Travel Assist can support the driver in monotonous and tiring driving situations commonly encountered on long motorway journeys. This system combines the functions of Adaptive Cruise Control (ACC) and Lane Assist with adaptive lane guidance to accelerate, brake and maintain the vehicles position within its lane. The capacitive steering wheel can detect whether the driver's hands are on the steering wheel in readiness to steer the vehicle and will issue a visual and audible warning when not detected.

Travel Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Travel Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
