The Touareg.

**Ready for
whatever.**

Exterior

The Touareg is innately an athlete that pleases the eye no matter what your vantage point. It sits well on the road, looking every bit the self-assured, sure-footed SUV. The front design with a prominent grill gives a striking impression and allows for improved aero-dynamics.

The integrated Bi-Xenon headlights with sleek LED daytime running lights emphasise the athletic contours in combination with the front fog lights. A sharpened tornado line on the tailgate and clean chrome highlights surround the vehicle tying in the design elements perfectly.

The sporting design on the V8 TDI R-Line has been honed to state its striking and powerful intent. The R-Line front and rear bumper, 21-inch 'Mallory' alloy wheels and sleek sill extensions further highlight the dynamic character of the Touareg.

It's a powerful, vigorous-looking vehicle and there are plenty of design touches – chrome integrated tailpipes, roof spoiler, radiator grille with chrome ribs and more – that hint at the versatility that lies below the surface.

V8 TDI R-Line model shown.

As distinctive and striking as the Touareg itself the alloy wheels are extremely robust and convey performance on all occasions (pictured from left to right).

- Arica 18-inch alloy wheels†**
- Mallory 21-inch alloy wheels^**
- Masafi 20-inch alloy wheels#**
- Yukon 18-inch alloy wheels***

V6 TDI model with optional Driver Assistance Package shown.

Interior

No matter what challenge is waiting outside for you inside the Touareg everything is readily accessible. The uniquely designed controls are operable with ease and communicate discreet elegance owing to chrome highlights and luxurious design trims that visually enhance the cabin.

The multi-function steering wheel is bound in leather, for the best possible comfort. It also carries controls for the radio, Bluetooth® phone connectivity and the multi-function display. Ergonomically designed to ensure minimal distraction from the task of driving, the controls fall naturally to hand, meaning you can concentrate on the road ahead at all times.

Convenience is at your fingertips with the dynamic RNS850 radio navigation system standard across the range featuring a large 8-inch high resolution colour touch-screen, 2D/3D map display, 60GB hard drive, SDHC card slot and DVD drive for extra convenience and entertainment.

It's comfortable too. Front seats feature 14-way electric adjustment including electro-pneumatic side bolsters, with Black Vienna leather appointed seat upholstery‡ standard on the 150TDI & 150TDI Element and a choice of Corn Silk Beige or Black Nappa leather appointed seat upholstery‡ seats for the V6 TDI. Rear seats feature a 60/40 split function to maximise load-carrying capacity.

The V8 TDI R-Line doesn't just impress with its power output, it also comes loaded with a range of equipment as standard. Keyless Access, Dynaudio premium audio system, 4 zone automatic climate control and two tone Nappa leather appointed‡ front comfort sports seats with embossed R-Line badging deliver all the creature comforts you could wish for.

‡ Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

Highlights

The Touareg is one of our most advanced models yet, with a range of clever technologies from the superior handling of the 4MOTION all wheel drive system to the Rear View Camera (RVC Plus)* and clever Driver Fatigue Detection System* providing the best drive possible without intruding on the driving experience itself.

Selecting the off-road function enhances the vehicle's off-road ability on loose surfaces such as gravel and snow by engaging technologies including ABSplus and Hill Descent Assist. With the aid of Electronic Differential Lock (EDL) the off-road driveability and control is greatly improved.

Air suspension with selectable settings (Comfort, Normal and Sport), self-levelling suspension, ride height adjustment and continuous speed-dependent electronic damping control results in a unique synergy of on and off-road qualities on the V6 TDI and V8 TDI R-Line models.

Powerful enough to handle almost anything, the Touareg has a towing capacity of 3500kg (braked) when fitted with a genuine Volkswagen tow bar.

Using four unobtrusively located cameras (in the front bumper, door mirrors and tailgate handle) Area View (Standard on the V6 TDI and V8 TDI R-Line) produces a 360° view all around the car – including areas the driver can't see. The cameras are also used to calculate a Birdseye view, which is shown on the audio system's display.

From engines and transmissions to efficiency measures and driver assistance systems, you'll find the Touareg to be safe and sophisticated, delivering the drive you want and leaving you fully in control.

01

02

03

04

01 Multi-collision Brake

Multi-collision brake acts to mitigate a secondary impact by triggering automatic (emergency) braking once an initial collision has been detected. In doing so, it reduces the risk of possible follow-on accidents.

02 Adaptive Cruise Control#~*

Working with the radar-controlled Front Assist traffic monitoring system, the Adaptive Cruise Control (ACC) detects if traffic ahead slows down and automatically reduces your speed. If you are too close to the car in front, it will activate City Emergency Brake#~* (City EB) (not pictured) warning you with visual and acoustic signals, and then with a short braking jolt.

03 Lane Assist**

Lane Assist reduces the likelihood of your vehicle veering off the road or accidentally crossing into another lane warning the driver via steering wheel vibrations.

04 Side Assist#~*

Side Assist helps to prevent accidents during lane-change manoeuvres. The system monitors the area to the left and right of the vehicle and up to 50m behind it and warns the driver of a potentially hazardous lane change situation by means of flashing warning lights in the exterior mirrors.

Colours & Upholstery

01 Flint Grey / Black Nappa leather appointed seat upholstery^{†‡}

02 Corn Silk Beige leather appointed seat upholstery^{#‡}

03 Black Vienna leather appointed seat upholstery^{†‡}

04 Black Nappa leather appointed seat upholstery^{#‡}

05 Pure White

06 Light Silver Metallic

07 Moonlight Blue Pearl Effect

08 Canyon Grey Metallic

09 Deep Black Pearl Effect

10 Tungsten Silver Metallic*

Please note that Metallic and Pearl Effect paint are optional at extra cost. The print process does not allow for exact reproduction of the exterior or the upholstery colours. Please contact your Volkswagen Dealer for further information on colours and upholstery combinations.

† Standard for 150TDI & 150TDI Element # Standard for V6 TDI ^ Standard for V8 TDI R-Line. * Not available for V8 TDI R-Line. ‡ Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

Performance#			
0 – 100 km/h	8.5	7.6	5.8
Fuel consumption **			
Combined, L/100km	7.2	7.4	9.2
Urban, L/100km	8.4	8.6	12.0
Extra Urban, L/100km	6.5	6.7	7.5
CO ₂ emission g/km	190	196	242
Fuel tank capacity, Litres	85	100	100

* The Start/Stop system is designed to reduce fuel consumption and CO₂ emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

Please note figures are sourced from overseas data where equipment levels by model variant may vary.

** Fuel consumption figures according to Australian Design Rule (ADR) 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

Flint Grey / Black – Nappa Leather appointed seat upholstery*	S	S	S	—	S	S

*Leather appointed seats has a combination of genuine and artificial leather, but are not wholly leather
Please note Metallic (M) and Pearl Effect (PE) paint are optional at extra cost on 150TDI, V6 TDI.

Glossary

4MOTION

The power of the Touareg engine is transmitted to the wheels via the permanent 4MOTION all-wheel drive system. This flow of power is handled by a Torsen transfer box to direct drive to the wheels where required to provide the best possible traction at all road speeds, in all weather and road conditions.

Adaptive Cruise Control (ACC)*

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on radar sensors, multi-function camera and parking distance sensors. When ACC is activated, the vehicle automatically brakes and accelerates in a speed and distance set by the driver.

If the Touareg approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Touareg then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates. ACC will reactivate automatically if the traffic moves within 2 seconds, otherwise the driver can reactivate the system by depressing the accelerator pedal.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system does not react to stationary obstacles and oncoming vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-lock Braking System (ABSplus)

In addition to the functionality of ABS, when the off road function is selected via the centre console dial the ABSplus is activated. If loose surfaces are registered, wheel lock forms a wedge in front of the wheels significantly shortening braking distances in off-road conditions.

Auto Hold

When activated, as soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicles final braking pressure. So even when you take your foot off the brake pedal, all four wheels brakes remain applied, preventing the vehicle from rolling away without having to depress the footbrake providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Brake Assist

During emergency braking, Brake assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system.

Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction. EDL is active on both axles in forward and reverse and operates up to 40km/h.

Anti-Slip Regulation (ASR)

ASR is a switchable traction control system that prevents the wheels from spinning under acceleration by reducing engine torque. It is active at speeds above 40km/h.

Glossary

Coasting Function[^]

While driving, as the driver's foot is taken off the accelerator pedal the engine is declutched, allowing the vehicle to coast and roll over a longer distance. The momentum of the vehicle is used to save fuel with a foresighted driving style. When the brake, accelerator pedal or the gear selector lever is operated, the clutch is re-engaged and engine braking / drive takes effect. Coasting Function can be selected or deselected via the multifunction display settings. The gear selector lever is required to be in the D position to be functional.

Electronic Stabilisation Program (ESP)

ABS, EDL and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Engine Braking Control (EBC)

Prevents the driven wheels from locking if the accelerator is lifted very suddenly or the vehicle is braked sharply because a low gear is engaged.

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 65 km/h, and calculates a fatigue estimate.

If fatigue is detected, the driver is warned by information in the Multi-function Display (MFD Premium) and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Front Assist with City Emergency Brake (City EB) function*

Above 30km/h, the Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. If the situation escalates, the Front Assist function provides automatic braking and/or boosting of the driver's braking force up to maximum braking in critical situations in an attempt to reduce the impact severity.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action.

However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Front Assist with City Emergency Brake (City EB) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Hill Descent Assist

Hill Descent Assist supports the driver when driving down a steep incline at the speed elected by the driver by means of actively controlled brake applications. Hill Descent Assistance will only operate when off road mode is activated, speeds are lower than 30km/h, the gradient is greater than 10%, the engine is running and the accelerator and brake pedals are not pressed.

Glossary

Hill Hold Assist

The Hill Hold Assist function comes into effect when stationary on steep inclines, utilising the transmission as necessary to prevent the vehicle rolling back.

Lane Assist*^

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a multi-function camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the driver is warned about the situation by a steering wheel vibration.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Proactive occupant protection system*

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation, the occupants and the vehicle are prepared for a possible accident. Automatic tensioning of the safety belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. In case of high transverse dynamics the side windows and optional panoramic sunroof are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

Side Assist*

Side Assist, is a lane change assistant detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash.
