Passat Elegance Sedan model shown with optional R-Line package

Passat

Elegance and functionality combined

The Volkswagen Passat is one of the most complete vehicles on the road. Timeless elegance combines with practicality and outstanding innovation to create a car that you'll relish driving time and time again.

The Passat exudes understated style from front to rear with every consideration given to aesthetics and function. Here is a vehicle that displays quiet sophistication and unmistakable confidence, but don't underestimate the breadth of technology instilled – often discreetly – in every Passat.

Volkswagen's innovative IQ.DRIVE range of safety systems uses sensors all around the vehicle to keep the Passat on the road – and driver and passengers safe. Other features such as LED headlights and tail lights, and striking alloy wheels are stylish additions that are bound to impress. Refined elegance and functionality are just as much a feature of the Passat's cabin. Comfortable and supportive seats in a range of cloth and leather appointed trim# make every drive a simple pleasure. At the same time, the Passat's 8-inch Discover Media navigation system with DAB+ digital radio, wired and wireless App-Connect- puts a world of infotainment options right at your fingertips. Levels of innovation and comfort only increase when you choose a higher specification of Passat.

The optional R-Line package (Elegance variant only) adds sporty touches inside and out, as does the 206TSI R-Line, with its powerful 206kW engine. The Passat Alltrack, available in two trim levels, and with its 7-speed DSG gearbox and efficient 4MOTION all-wheel drive, is for all those drivers who lust for off-road adventure.

No matter which you choose, the new Passat is a vehicle worthy of wearing the new Volkswagen badge.

-App-Connect featuring wireless Apple CarPlay® and wireless Android Auto™ is compatible with the latest versions of iOS and Android, active data service required, optional connection cable (sold separately).
#Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

Exterior

Combining style and sophistication with a commanding on-road presence, the Volkswagen Passat has the looks to match its outstanding performance.

The Passat is unmistakably a Volkswagen when viewed from the front. A sweeping horizontal radiator grille integrates seamlessly with piercing LED headlights and showcases the new Volkswagen roundel. Below the bumper, the broad air intake forms a cohesive whole with streamlined LED fog lights.

The Passat’s profile shows off its harmonious proportions, with the vehicle’s assertive shoulder line acting to draw the viewer’s eyes along the length of the vehicle.

At the rear, LED tail lights nestle across the Passat’s rear panels and tailgate, forming a neat frame for the Passat badging on the tailgate.

Step into the 162TSI Elegance and other stylish additions are fitted as standard. Dark 18-inch ‘Liverpool’ alloy wheels set the Elegance apart from other Passat variants, as does an easy open-and-close tailgate.

For anyone wanting to make a powerful visual statement, it’s impossible to go past the dynamic and dominant features contained in the optional R-Line package (for the Elegance variant). A contoured roof spoiler, R-Line front and rear bumpers, and rear tinted windows give the Passat a hint of menace. Combine these elements with appealing 18-inch ‘Monterey’ alloy wheels in the R-Line package and the Passat looks like it wants to devour the road ahead of it.

Passat Wagon 206TSI R-Line model

Interior

If the Passat's assured and smooth character wasn't already apparent in its exterior styling, a glance at the vehicle's luxurious interior appointments will readily convince even the most discerning driver. The Passat's cabin offers superior aesthetics and cool sophistication, but never at the expense of comfort or practicality. Easy entry and seat memory function in the Passat range (and Alltrack 162TSI Premium) make it easy to access the vehicle and find a comfortable driving position. Air Care 3-zone climate control with rear controls make it a cinch to maintain optimal temperature conditions. The 162TSI Elegance adds an extra level of refinement with ambient interior lighting and Nappa leather# appointed seat trim. 'Dayton Brush' brushed aluminium inserts for the dashboard and door add a distinctive touch, while the Panoramic glass sunroof allows for a gloriously light-filled cabin. R-Line styling cues in the optional R-Line package (Elegance variant only) bring an undeniably sporty edge to the Passat's cabin. Features such as R-Line scuff plates in door apertures, R-Line decorative inserts in brushed silver, brushed stainless steel pedals and an alluring R-Line multi-function sports steering with wheel paddles, will make you the envy of your friends.

#Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

Technology

Few vehicles combine an array of technological innovation in one package quite like the Volkswagen Passat. A comprehensive range of driver assistance aids make every drive comfortable, safe and satisfying, while the Passat’s unique infotainment systems offer outstanding sound and vision, not to mention impressive levels of connectivity. Touch climate controls now come as standard across the Passat range, making it easier than ever to maintain optimal in-cabin temperature conditions. A touch-sensitive surface means fan speed and temperature can be controlled with a simple slide or push with your finger.

For the first time ever in the Passat, clever Area View* technology is a standard inclusion in the Elegance, Premium and R-Line variants. Four cameras are placed discreetly around the Passat, giving the driver a bird’s eye view of the area surrounding the vehicle. Area View* is particularly useful when parking in tight spaces or when avoiding nearby obstacles.

Passat owners are truly spoilt when it comes to infotainment options. The Alltrack 162TSI features an intuitive 8-inch Discover Media navigation system with gesture control, with higher Passat grades receiving the 9.2-inch Discover Pro navigation system with gesture control and impressive Digital Cockpit Pro instrument display.

Music lovers can revel in all their favourite entertainment content with App-Connect~, which offers lightning fast data streaming via wired and wireless Apple CarPlay® and Android Auto™. And true audiophiles will be inspired by the crystal clear audio offered by the Harman/Kardon premium sound system in the Elegance and Alltrack Premium variants.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.
~App-Connect featuring wireless Apple CarPlay® and wireless Android Auto™ is compatible with the latest versions of iOS and Android, active data service required, optional connection cable (sold separately).

IQ.DRIVE

An extensive suite of driver assistance and safety features are included in every Volkswagen, but only now have all of these intelligent driver assistance technologies been brought under the one name – IQ.DRIVE.

IQ.DRIVE bundles all of Volkswagen’s driver assistance aids together – those that exist now and those yet to come – with a view to reaching the end point of truly autonomous driving. All of the safety features contained in IQ.DRIVE are offered across the entire Passat model range, providing comprehensive peace of mind for driver and passengers alike. Among the safety technology included in IQ.DRIVE is Travel Assist*, an innovative system that allows for partially automated driving at a range of speeds. Travel Assist* uses sensors, radars and a camera to observe the space around the vehicle and works with Lane Assist* with Adaptive Lane Guidance* and Adaptive Cruise Control (ACC)* to provide effortless semi-autonomous driving.

Other safety inclusions have perfect application when driving on busy streets and parking in tight spaces. Pedestrian Monitoring* will first alert the driver, and then implement an emergency braking procedure to avoid striking a pedestrian about to cross the Passat’s path. Park Assist* takes the hassle – and the low-speed bumps and scrapes – out of difficult parking manoeuvres.

Other safety innovations are there when you need them most. Clever Emergency Assist* technology provides an escalating series of visual and audible warnings to the driver if no steering activity is detected, such as when the driver is incapacitated. The system implements harm reduction measures before performing a safe emergency stop as a last resort.

All of these systems work in conjunction with other trusted safety features in the Passat, such as 360° Proactive Occupant Protection*, Driver Fatigue Detection*, Side Assist* and more, to ensure optimal safety.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

Passat Alltrack

The Passat Alltrack offers the very best features of the Passat range in a rugged package built to take on rough terrain. With its 2.0-litre TSI engine capable of an impressive 162kW of power and 350Nm of torque, the Passat Alltrack is a vehicle to be driven and enjoyed anywhere.

The Alltrack is the only variant in the Passat range to feature both a sweet-shifting 7-speed DSG gearbox and Volkswagen's 4MOTION permanent all-wheel drive (4MOTION also available with a 6-speed DSG in the 206TSI R-Line). This ingenious technology ensures the Passat retains optimum traction by continually adjusting power distribution to the front and rear axles as needed. It's a must have when driving on challenging off-road surfaces.

Available in two trim levels – the Alltrack 162TSI and the Alltrack 162TSI Premium – the Alltrack features IQ.DRIVE technology for an assured and safe journey. A key component of the IQ.DRIVE system is Adaptive Cruise Control (ACC)*, an intelligent driver aid that not only maintains a set speed but keeps the vehicle a safe distance from the one in front. It's particularly useful when driving long distances, as is Driver Fatigue Detection*, which provides a visual and audible signal when it's time to take a break.

Elegant Passat styling, functional and comfortable interior conveniences and superior infotainment connectivity are all hallmarks of the Alltrack 162TSI. But added features such as '7 Summits' cloth trim and decorative 'Tracks' trim distinguish it from every other Passat.

As the name suggests, the Alltrack 162TSI Premium incorporates additional impressive appointments for a superior driving experience. Features such as IQ.LIGHT matrix LED headlights, Area View*, Panoramic glass sunroof, Digital Cockpit Pro and Harman/Kardon sound system are all included. With features such as these, the Alltrack Premium isn't just for going anywhere, it's a vehicle to be savoured with every drive.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

Passat Premium Alltrack model shown.
Pure White not available on Model Year 2022 Passat Alltrack

Passat Wagon 206TSI R-Line

The Passat Wagon 206TSI R-Line combines exhilarating performance and style in a package that will thrill with every drive. It's the only Passat in the range to feature Volkswagen's potent 206kW/350Nm engine, which means abundant power is on tap with every push of the accelerator. Add 4MOTION drive to the mix and the Passat Wagon 206TSI R-Line elevates traction, acceleration and grip performance to seriously impressive levels.

The Passat Wagon 206TSI R-Line is a performance trailblazer, so it's only right that it has the looks to match. The vehicle receives the full R-Line styling treatment, which means a range of eye-catching exterior and interior features have been added that set it apart from the rest of the Passat range. Unique R-Line front and rear bumpers and a contoured roof spoiler make key contributions to the Passat Wagon 206TSI R-Line's sweeping profile. Adding further to the vehicle's sporty aesthetic are exclusive 19-inch 'Pretoria' alloy wheels in matte graphic and enticing Lapiz Blue Premium Metallic body paint, also exclusive.

R-Line styling continues inside the cabin, which exudes class and confidence with its R-Line leather appointed trim, scuff plates in the door apertures, decorative inserts in brushed silver rise and black roof liner. Putting the driver at the centre of the action are brushed stainless steel pedals and R-Line multifunction sports steering wheel paddles for ultimate gearshift control and tactility.

Proving that the Passat Wagon 206TSI R-Line never forsakes comfort for pure driving performance are additional conveniences designed to pamper and surprise. Heated and electric front seats with driver massage are the epitome of comfort, while easy entry and memory function makes it easy to find a supported seating position. For the perfect mood-setter, the Passat Wagon 206TSI R-Line also allows you to choose from among 30 ambient interior light colours.

Peace of Mind

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles¹.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership². That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans³ have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing⁴ gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts[®] to ensure your Volkswagen stays a Volkswagen.

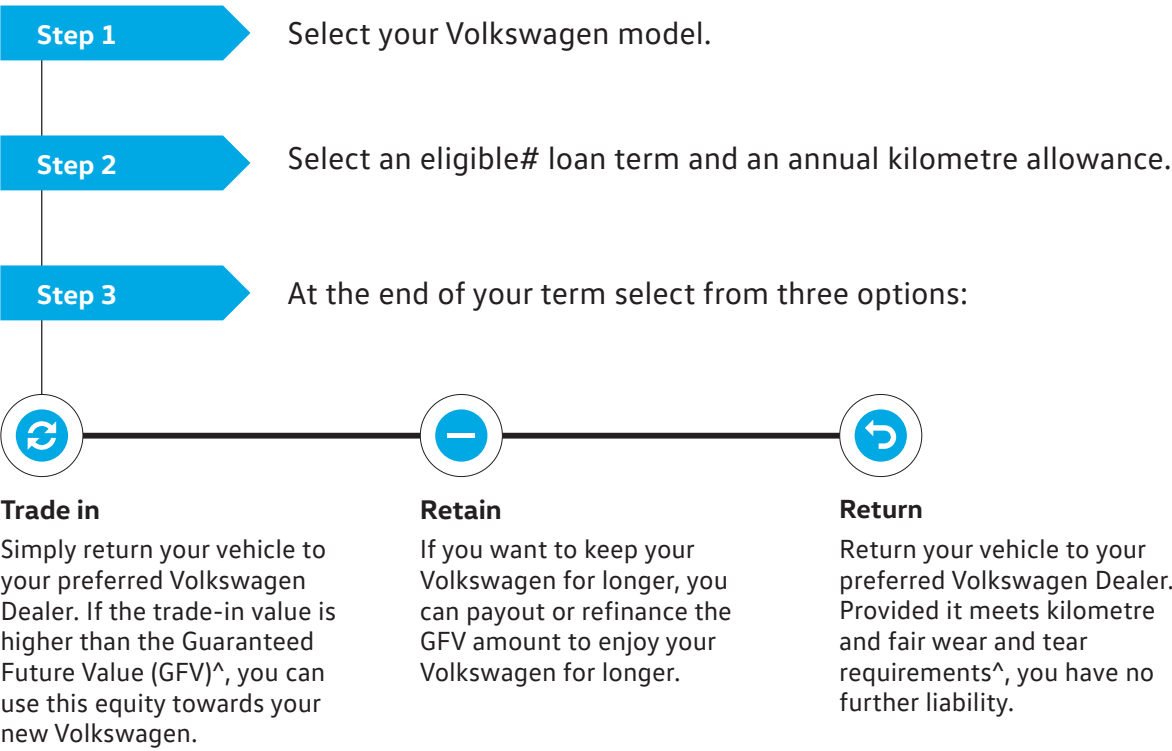

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

Volkswagen Choice[^]

Guarantee the minimum future value of your Volkswagen

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

1. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

2. Volkswagen Roadside Assist membership is provided by AWP Australia Pty Ltd ABN 52 097 227 177 trading as Allianz Global Assistance. Whenever you request roadside vehicle assistance under your membership, you will be making that request to Allianz Global Assistance, who will provide the services under an arrangement with Volkswagen Group Australia Pty Limited ABN 14 093 117 876. The terms and conditions contain exclusions and limitations, please visit <https://www.volkswagen.com.au/en/owners-service/roadside-assist.html>.

3. Volkswagen Care Plans are available for purchase at <https://www.volkswagen.com.au/en/owners-service/care-plans.html> or from participating authorised Volkswagen Dealers for Eligible Vehicles and covers standard items as contained in each scheduled service interval only. The service intervals occur every 15,000 KM/12 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 onwards Amarok vehicles, which are scheduled to occur every 20,000 km/12 months (whichever occurs first). These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 onwards Amarok vehicles which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions.

4. Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for MY18 to current Crafter vehicles and MY21 onwards Amarok vehicles only, 20,000kms/ 12 month interval (whoever occurs first). Volkswagen will publish the maximum price for a specified Scheduled Service on 1st February each year (or first business day after this date), and pricing will remain fixed for 12 months only. For more details on the Eligible Model's, pricing, items not included and for full terms and condition, please see <https://www.volkswagen.com.au/app/locals/service-pricing-guide>.

[^]Volkswagen Guaranteed Future Value consists of an option to return your vehicle to Volkswagen Financial Services (VFS) ABN 20 097 071 460, Australian Credit Licence 389344, at the end of the term and requires VFS to purchase the vehicle at an agreed price determined by VFS, known as the Guaranteed Future Value (GFV). #Eligible loan terms include 12-60 months, vary by model and are subject to change, ask dealer for more information. At the end of the term, you can elect to: (1) trade-in; (2) return; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your Official Volkswagen Dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

R-Line Package

- Alloy wheels (Monterey) 18 x 8" with 235/45 R18 mobility tyres
- Aluminium finish accelerator and brake pedals
- Aluminium finish front and rear door scuff plates
- Black headlining and pillar trim
- Dark tinted rear side window and rear window glass, 65% light absorbing
- Decorative inlays, 'Piano Black' instrument surround, centre console
- Decorative aluminium inserts, 'Silver Rise' for dashboard and door trim panels
- 3 spoke leather covered sports steering wheel R-Line badge
- Progressive steering
- R-Line badge in radiator grille
- R-Line front bumper with front spoiler and large lower air intake
- R-Line side sill extensions
- R-Line rear bumper with dual chrome exhaust trims left and right
- Rear roof spoiler with black aerodynamic extensions (Wagon)
- Sports suspension, lowered approximately 15mm
- Sport front seats in Carbon Nappa leather appointed seat upholstery with R-Line logo and decorative stitchin*
- Carpet mats, front and rear with decorative stitching

*Leather appointed seats has a combination of genuine and artificial leather, but are not wholly leather
Please note: Seat ventilation is not included in combination with the optional R-Line package

* The Start/Stop system is designed to reduce fuel consumption and CO2 emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

~ Emission level according to European Regulation (EC) No. 715/2007 and Regulation (EC) No. 692/2008, UN ECE R83/06 and later amendments.

** Fuel consumption figures according to Australia Design Rule (ADR) 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition, and accessories fitted, will in practice in the real world lead to figures, which generally differ, from those advertised. Advertised figures are meant for comparison amongst vehicles only.

¶ Towbar is compatible with Passat Wagon & R-Line Package. The driving style, road and traffic conditions, environmental influences, fitment of accessories and vehicle condition can in practice lead to consumption figures which may differ from those calculated with these standards.

^Please note towbar capacities are applicable to the Genuine Volkswagen Accessory towbar. Volkswagen Group Australia does not endorse or will not be held liable for any claim, loss or damage arising from the use or fitment of electronic trailer brakes.

Glossary

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Passat approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Passat then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with a DSG transmission. ACC can be reactivated automatically by depressing the accelerator pedal. In vehicles fitted with a manual transmission, the system is automatically deactivated at speeds below 30 km/h and the driver is prompted to take charge by visual and acoustic signals.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR improves driving and steering characteristics by preventing the driven wheels from spinning under acceleration. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system automatically reduces engine torque. ASR is a switchable traction control system.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicles final braking pressure. So even when you take your foot off the brake pedal, all four wheels brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Direct Shift Gearbox (DSG)

DSG is a manual gearbox in which the gearshifts are controlled electronically. What makes the DSG unique is that it has 2 separate gear sets operated by 2 clutches.

The benefit of 2 gear sets and 2 clutches is that one gear set and clutch is engaged driving the vehicle with the second disengaged clutch having already pre-selected the next gear awaiting for power to be transferred. As the next gear has already been pre-selected prior to power being applied, the gear change only takes 3-4 100ths of a second. There is virtually no interruption to power, traction or acceleration.

The DSG also offers Tiptronic gear selection and sports mode.

Driving Profile Selection

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal and steering while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

Coasting Function

While driving, as the driver's foot is taken off the accelerator pedal the engine is declutched, allowing the vehicle to coast and roll over a longer distance. The momentum of the vehicle is used to save fuel with a foresighted driving style. When the brake, accelerator pedal or the gear selector lever is operated, the clutch is re-engaged and engine braking / drive takes effect. Coasting Function can be selected or deselected via the multifunction display settings. The gear selector lever is required to be in the D position to be functional.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Glossary

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle performs a slight snaking motion within its lane to warn other road users. Ideally this will prevent collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Driver Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 65 km/h, and calculates a fatigue estimate.

If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Driver Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Front Assist with Pedestrian Monitoring functions

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

The Front Assist function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, Front Assist monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, Front Assist first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, Front Assist independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, Front Assist will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system. The system uses a radar sensor in the radiator grille to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with City Emergency Brake (City EB) and Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Glossary

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Side Assist with Rear Traffic Alert

Side Assist, is a lane change assistant that detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash.

Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing via an audible warning followed by a visual message in the Optical Parking System (OPS).

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Travel Assist

Travel Assist is an assistance system for partly automated driving. At the push of a button, Travel Assist can support the driver in monotonous and tiring driving situations commonly encountered on long motorway journeys. This system combines the functions of Adaptive Cruise Control (ACC), Lane Assist with adaptive lane guidance and Side Assist to accelerate, brake and maintain the vehicle's position within its lane. The capacitive steering wheel can detect whether the driver's hands are on the steering wheel in readiness to steer the vehicle and will issue a visual and audible warning when not detected.

Travel Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Travel Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
