The ESP® is designed to help keep the vehicle under control. However, the degree of engine torque reduction, the wheels that brake
and their braking force vary according to the driving conditions. ESP® is essentially a system to assist stable driving. In the case of
slippage or skidding that exceeds the limits of grip between tyres and road surface, ESP® will still function but may not be effective. All
safety technology including ESP®, ABS and DSBS are functions to assist the driver and do not eliminate the need to drive safely or in
accordance with driving conditions. Specifications are subject to change. Published in December 2021.
